

Wagga Iron

Stock

We keep ample stock of all castings to ensure prompt delivery. Our range of patterns is growing. We will extend our catalogue soon. We welcome your helpful information and suggestions.

Metal

We do not see castings imported from Asia. The iron being used for our stove castings has a high phosphorus content, which is resistant to heat distortion.

Identification

This catalogue will help stove owners to replace burnt or broken castings. We have designed the layout for easy reference. If in doubt, please check your customer's casting against our photographs. Usually the shape of the required casting is recognised by the customer looking at the photographs.

We enclose a schedule listed in the photograph's reference number order. This helps you to find the casting's detail, which is listed alphabetically in the catalogue and price list. Some castings look alike, in which case it is wise to check the dimensions make, model and other detail listed. If this fails to identify a casting, we may be able to do so from a dimensioned sketch. Finally we may be able to reproduce the original shape of the warped casting, if it is sent to us with a sketch, giving the correct dimensions to fit the stove or heater.

Weights and Dimensions

We include approximate weights and dimensions. The listed dimensions are overall excluding lugs.

Ref	Name	Model	Casting		Weight	Dimensions	Pat. Ref
