

# Wagga Iron

Tree Grates for Great Trees

**Strength:** Wagga Iron tree grates are cast in **ductile iron**.

**Safety:** This strength acts as an insurance against unsightly and dangerous broken tree grates seen on pavements in many streets throughout Australia. We have pedestrians' and cyclists' lawyers in mind.

**Wagga Iron** tree grates have a secure fastening system. Segments bolt together in a way that leaves the grates rigid and secure. No more wobblers.

**Wagga Iron** tree grates conform with AS 3996 with particular regard to bicycle safety. Also they are shopping trolley friendly.

The centre holes can be enlarged to accommodate the trees as they grow. In effect the pavement is taken close to the trees.

**Features:** Wagga Iron has the capacity to create a beautiful, safe, and practical tree grate of your choice.

Added features such as lighting (set below the grate to enhance the beauty of the tree at night) can be incorporated into your tree grate at little extra cost.

**Beauty:** Wagga Iron tree grates are lovely. Your trees will make others green with envy.

**Weight:** Wagga Iron tree grates weigh 21kg per section, sufficiently light for one bloke to handle during installation.

## The Wagga Iron Foundry

220 – 224 Hammond Avenue, Wagga  
P.O. Box 374, Wagga Wagga, 2650
