

# Wagga Iron

Firebacks to insert in an open fireplace can be made to order. We do have some template designs of various sizes that may be suitable for your Open fireplace. Firebacks are cast from cast iron and are approximately 10 -12mm thick. Excessive heat from a large fireplace can over time cause the fireback to warp so it is important to take the thickness into account when designing a custom pattern.

Listed below are photos of basic patterns or templates for firebacks available. Firebacks can be customised with family crests/ plaques or decorative trim. The sales team will be only too happy to discuss your ideas and requirements.

**Fire back No 1 (with Lady and Dog Plaque )**

**Fire back No 2**

**Fire back No 3- Metters**
